DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 12-17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Ronen (5845267).

Ronen discloses a method for performing centralized billing for transactions conducted by a user on a terminal connected on an Intranet with an Internet Service Provider (ISP), which connected to the Internet. The method is designed to remote access via the terminal through the telephone network.

Ronen further discloses the method is designed to generate the connection information including the IP address of the user's terminal, the user's identity, connection ID between the Gateway and the ISP and password for accessing the account. And all these data will be stored in a database for the billing purpose.

Ronen demonstrates that the method including a billing mechanism, the user provides his or her selected choices for how charges for transactions on the Internet are to be billed. These choices may include an account associated with a telephone number or a credit card to be billed.

Ronen discloses a method for performing centralized billing for transactions conducted by a user on a terminal connected on an Intranet with an Internet Service Provider (ISP). It inherently shows implementing multiple communication links to determine if the transaction has been satisfied since the verification steps must be made in advance in order to know when the user has fulfilled the method's requirement.

2. Claims 1 -11 and 18 substantially recite the underlying process steps of the elements of method claims 12 - 17 accordingly. As the various elements of claims 12 - 17 have been shown to be taught by Carnegie. It is readily apparent that the device disclosed by the applied prior art performs the recited underlying function. As such, the limitations recited in claims 1 -11 and 18 are rejected for the same reasons given above for method claims 12 - 17.
